

Tensioner kit instructions.

Your kit comprises of tensioners, wire and vine eyes

The number depends on how many wires you require.

Tensioner

Wire

Vine eye

Large post

- Step 1** Insert the posts in the ground leaving approximately 4 feet above ground, at the required distance apart.
This distance will depend on the number of trained fruit trees to be planted.

- Step 2** Screw the vine eyes into one of the posts at 18 to 20 inch distances in height.

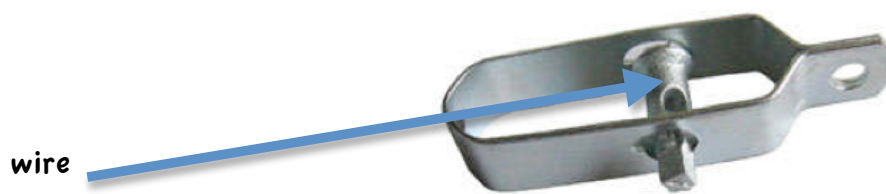

Step 3 Use a wood screw to fasten the tensioners on the outside of the other post at the same distances in height.

Step 4 Insert wire into vine eye and twist to secure.

Step 5 stretch wire from vine eye to tensioner and cut to a size slightly longer than the length required. Feed wire through hole in front of tensioner and insert into hole on adjuster as shown .

Step 6 Bend wire through hole in tensioner and then use a spanner to tighten the tensioner until the wire is taut.

Plant trees as per instructions for planting a tree

Tie the trained branches to the wires securing with ties
