Fruiting in:	3 yrs	3-4 yrs
Cropping potential:	6-7yrs 30kg	7yrs 50kg
Soil/site:	Requires good deep fertile loam	More tolerant of lighter chalky or heavier clay soils
Stake:	Permanent Stake	Permanent Stake

Considerations when choosing a tree:

As well as providing fruit, the tree will be decorative, can provide shelter, can act as a screen and sound barrier, provide shade and attract wildlife.

Ensure the tree is appropriate for your area and use.

Is it hardy enough and will it stand frosts?

Will it flower or bear fruit when required?

Remember that some varieties have ornamental value in their fruits and blossom.

Be aware of micro-climates where weather conditions vary from normal.

Take care if the site is north facing or windy, factors which will limit your choice.

Consider the size and study possible rootstocks. Imagine the tree in twenty years.

Call us or get in touch through the website for more advice on selecting your tree.

We are always happy to help.
